PATENT APPLICATION

entitled: INSTALLATION FOR SPRAYING COATING PRODUCT AND
 PROCESS FOR CLEANING SUCH AN INSTALLATION

ABSTRACT OF THE DISCLOSURE

The installation according to the invention comprises at least one robot of which a mobile part supports at least one sprayer and a tank of coating product connected thereto for feeding the sprayer. The robot bears a second tank adapted to be filled with cleaning product, this second tank being connected to feed cleaning product to the tank of coating product, the sprayer and/or the conduits connecting the first tank to the sprayer.

The first tank, the sprayer and/or the conduits can be cleaned in masked time.
